"NEVER FORGETS."

NEVER FORGET.

Even though we guarantee your Elephant Flexible Disks to meet or beat all industry standards, we can't promise they'll forever retain their memory — unless you promise you'll forever do (or don't do) the following things:

1. DON'T TOUCH THE SHINY PARTS.

(The exposed "plastic" slits or dots that show through the black paper liner.) And don't touch them with *anything*. They're vulnerable to fingerprints, dust, coffee spills, cigarette ashes, sneezes, and maybe even dirty looks. The best way to keep things from touching them is to keep the disks inside their protective sleeves whenever you're not actually using them.

2. DON'T JAM THEM INTO THEIR SLOTS.

Ease them gently into their drives, so they don't bend, scratch, or otherwise become offended.

3. BEWARE OF MAGNETISM.

The disk's "memory" comes from a critical arrangement of the tiny magnetic particles on the disk's surface. Therefore, exposing the disk to close contact with any kind of magnetic field (which you'll find in and around television sets, electric motors that run fans, typewriters, air conditioners, etc., as well as the coils in most loudspeakers) can muck up the arrangement of particles — and your disk will end up either with amnesia or madness.

4. HANDLE LIKE GLASS.

Which means don't bend them, sit on them, drop things on them, use them to prop up table legs, etc. If you do so, they will spite you.

5. KEEP THEM COMFORTABLE.

Meaning between 50°F to 125° Fahrenheit (10° to 52° Celsius). Intense heat or cold can cause lost memory or weakened sensitivity. As an egregious generality, though, if the room's comfortable enough for you, it's more than comfortable enough for your disks.

6. IF IT'S IMPORTANT, COPY IT.

Let's face it: the information on the disk is usually worth a whole lot more than the price of the disk. (Just in man-hours alone to recreate the stored information, let alone in what it could cost you if something like your entire accounts receivable file should all of a sudden "forget.") So by all means, if the data is valuable, make a copy of the disk and store it someplace safe — like a deposit box or fireproof vault.

ATARI®

DISKETTE

- **Never** wet or wash a Diskette. Dust it with a soft brush if necessary. Compressed air in a spray can may also be used to blow dust away.
- Heat is one of your Diskettes' worst enemies. Never store a Diskette in direct sunlight. Keep it away from excessive heat in general.

- **Never** BEND the Diskette. Handle your Diskettes with care, especially when loading or unloading them into the Disk Drive.

- **Never** attach paper clips to a Diskette.
- **Never** write on a Diskette or on the identification label of a Diskette with an erasable pencil or a ball-point pen. A fiber-tip pen is recommended for writing on the label.

- Magnetic Fields are another of your Diskettes' worst enemies. A Diskette exposed to a magnetic field will lose data. Keep Diskette away from magnets and electrical equipment (even telephones).

- **Never** touch the Diskette itself where it is exposed through the small "windows" in its protective envelope. It is not necessary to turn a Diskette in its envelope, the Disk Drive will take care of that.

NEVER FORGET.

Even though we guarantee your Elephant Flexible Disks to meet or beat all industry standards, we can't promise they'll forever retain their memory—unless you promise you'll forever do (or don't do) the following things:

1. DON'T TOUCH THE SHINY PARTS.

(The exposed "plastic" slits or dots that show through the black paper liner.) And don't touch them with *anything*. They're vulnerable to fingerprints, dust, coffee spills, cigarette ashes, sneezes, and maybe even dirty looks. How To Care for Your Floppy Disk

DO
keep your disk
in the protective
sleeve when it's
not in use.

DON'T
touch the
exposed parts
of your disk.

DO
insert your disk
into the disk
drive carefully.

DON'T
bend or fold
your disk. Han-
dle it with care.

50°-125°F

DO
keep your disk
at moderate
temperatures.

DON'T
put your disk
near any mag-
netic fields.
